

Spring Data Rest

A Project which demonstrates how Spring data rest works and what features it provides to users.

Project is based on spring boot which provide us a easy way to provide and configure our dependencies.

Admin credentials:

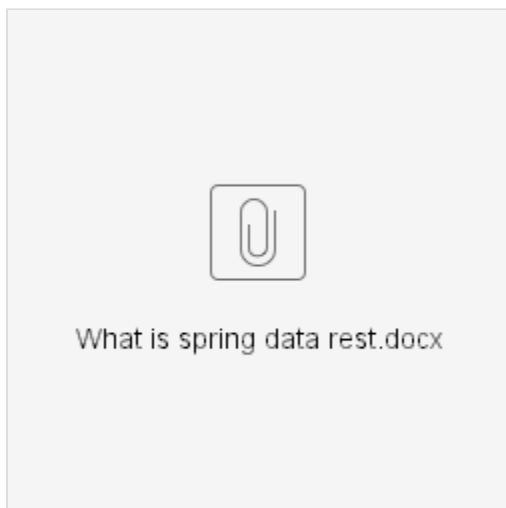

username: admin

password: admin

Step-by-step guide to start the project

1. Run in cmd: mvn clean install
2. Start app by runing in cmd: mvn spring-boot:run
3. Run in postman: <http://localhost:8080/api> to discover links necessary to call rest api services

Some spring data rest features are described bellow:
